

AQMesh

Small sensor air quality monitoring system

TOGETHER WE CREATE SOLUTIONS THAT SHAPE THE FUTURE

ambilabs[®]

AQMesh + Ambilabs®

The world's finest reference quality gas analyzers has teamed up with the best of breed small sensor Air Quality monitoring system.

Combining AQMesh with Ambilabs®'s superior range of gas analyzers will transform the way smart cities and progressive thinking organizations use the power of collective environmental monitoring to measure, report and adhere to air quality standards and regulations.

“Co-location comparison trials against certified reference equipment continue to prove AQMesh performance and reliability for localised air quality monitoring.

Environmental Technology 2018, "Latest AQMesh co-location studies show capability of small sensor systems", 14 Nov.

* Environmental Instruments Ltd 2016, "Looking for a 'low cost' air quality monitoring solution?" "10 reasons why you should choose AQMesh", 25 Jul

AQMESH

The tried and tested name in small sensor technology for commercial use:

- Hundreds of published scientific papers and research papers
- Thousands of hours of real-world trials and commercial placements in more than 30 countries
- No other commercially available small sensor system demonstrates better accuracy.*

AMBILABS®

Tier one trusted supplier of reference quality Air Quality Monitoring Systems (AQMS):

- Superior design, manufacture, installation and maintenance
- Air quality monitoring pioneer with 20 years' experience
- Serinus® gas analyzers for reference quality monitoring of O₃, CO, NO, NO₂, NO_x, NH₃, SO₂, H₂S, TS and TRS
- Hundreds of AQMS sites around the world consisting of thousands of individual pieces of reference quality monitoring equipment.

AQMESH + AMBILABS® GAS ANALYZERS

Designed to work alone, together with Serinus® gas analyzers or in harmony with new or existing reference quality AQMS:

- Practical, cost-effective, commercial indoor and outdoor use
- Greatly increase the spatial resolution of air quality monitoring networks
- Provides hyperlocal measurement and trend analysis over time of human exposure to air pollution.

“When tested appropriately and used with a full understanding of their capabilities and limitations, [small] sensors can be an unprecedented aid in a wide range of air quality applications.

Jayarathne et al. 2018, Atmospheric Measurement Techniques, "Low-cost PM_{2.5} sensors: Is the technology matured for wide spread application?"

Scalability

When multiple AQMesh pods are added together they deliver localized real-time air quality data that supports initiatives to reduce air pollution and its risk to human health.

It's this ability to easily add, subtract, or relocate individual AQMesh pods where and when required that provides environmental professionals with a level of monitoring flexibility and scalability not possible with fixed-site reference quality AQMS alone.

One to Many

Strategically placing a high number of AQMesh pods around and between a low number of reference quality AQMS stations delivers hyperlocal monitoring results.

However, small sensor technology is not a direct substitute for reference quality instruments, especially for mandatory or regulatory purposes.

That is why when AQMesh is used as a complementary source of information to augment and enhance existing reference quality AQMS networks, environmental professionals are rewarded with increased spatial resolution of air quality data.

Increased spatial resolution of air quality data dramatically multiplies the opportunity for better understanding, insight and action.

MELBOURNE SOUTH EASTERN SUBURBS

- A city of 5 million
- 5 Ambilabs reference quality AQMS stations
- 10-20 km apart
- Mixed land use over changing topography: Suburban, residential, commercial, industrial, roads, parks

WHAT AN AUGMENTED AIR MONITORING NETWORK COULD LOOK LIKE

- Add 25 AQMesh pods
- Each pod 3-7 km apart
- 5 AQMS + 25 AQMesh = Significantly increase understanding of air quality at the neighbourhood level

AQMesh

The proven small sensor air quality monitoring system

AQMesh has been designed to offer a robust and easy-to-use air quality monitoring system that can deliver localised real-time readings, improving the accuracy and scope of gathering air quality data to support initiatives to reduce air pollution and its risk to human health.

“**New ‘hyperlocal’ [AQMesh] sensor network will monitor London’s air quality.**

Intelligent Transport 2018, 22 Jun

“**[Small] sensors are not currently a direct substitute for reference instruments, especially for mandatory purposes; they are however a complementary source of information, provided an appropriate sensor is used.**

World Meteorological Organization (WMO), International Global Atmospheric Chemistry (IGAC) & UN Environment, 2018 May, “Low-cost sensors for the measurement of atmospheric composition: Overview of topic and future applications”

Power

Sensor type	Expected life span	Notes
External DC	> 5 years	9 – 24V DC
Lithium metal battery pack ^{#9}	> 24 months	Dependent on measurement strategy & pod spec
External high capacity battery pack ^{#9}	> 60 months	Dependent on measurement strategy & pod spec
NIMH rechargeable battery pack ^{#9}	> 4 months	Dependent on measurement strategy & pod spec
Solar power pack	> 5 years	Change internal lead-acid battery every 24 months

Sensor life

Sensor type	Expected life span
Electrochemical	2 years ^{#7}
NDIR	5 years
Solid state	5 years
Omnidirectional microphone	5 years
Optical particle counter	1 year (minimum) ^{#7} ^{#8}

Physical

ENCLOSURE
ABS, protection IP65
ENVIRONMENTAL
Temperature range: -20°C to +40 °C
Humidity range: 15 to 95 % RH
MOUNTING
Pod supplied with mounting bracket for walls / posts
APPROX. SIZE & WEIGHT
Length: 170 mm
Width: 220 mm
Height (excl antenna): 250 mm
Height (incl antenna): 430 mm
Weight: 2 – 2.7 kg

Data & Communications

COMMUNICATIONS
Data sent to remote server via 2G or 3G SIM (data access contract is required)
MEASUREMENT PERIOD
Variable, from 1 min to 1 hr
TRANSMISSION FREQUENCY
Variable, from 5 mins to 12 hr intervals
SERVER SOFTWARE
Web browser based, processing of sensor output to give reading, database storage on secure server
DATA ACCESS
Tables, graphs, data download, multi-user access, password controlled, optional API data access

AQMESH PLUS SPECIFICATIONS*

Measurement

Sensor	Sensor Type	Units	Range
NO	Electrochemical	ppb or µg/m ³	0 to 4,000 ppb
NO ₂	Electrochemical	ppb or µg/m ³	0 to 4,000 ppb
NO _x	Electrochemical	ppb or µg/m ³	0 to 8,000 ppb
O ₃	Electrochemical	ppb or µg/m ³	0 to 1,800 ppb
CO	Electrochemical	ppb or µg/m ³	0 to 6,000 ppb
SO ₂	Electrochemical	ppb or µg/m ³	0 to 10,000 ppb
H ₂ S	Electrochemical	ppb or µg/m ³	0 to 100,000 ppb
CO ₂	NDIR	ppm or mg/m ³	0 to 5,000 ppm
Pod temperature	Solid state	°C or °F	-20 °C to 100 °C
Pressure	Solid state	mb	500 to 1500 mb
Humidity	Solid state	%	0 to 100 %
Noise	Omnidirectional mic	dB	35 to 100 dB SPL
Particle count	Optical particle counter	Particles/cm ³	0.30 to 30 µm
PM ₁ ^{#1}	Optical particle counter	µg/m ³	0 to 200 µg/m ³
PM _{2.5} ^{#1}	Optical particle counter	µg/m ³	0 to 500 µg/m ³
PM ₁₀ ^{#1}	Optical particle counter	µg/m ³	0 to 1,000 µg/m ³
Lat, long, alt	GPS	decimal	N/A

Product designs and specifications are subject to change without prior notice.

The user is responsible for determining the suitability of the product.

#1 Mass estimation based on standardisation of particle shape and density.

#2 From sensor manufacturer's specification. This data was derived from independent lab tests. Standard test conditions are 20 °C and 80 % RH and in the absence of interfering gases. Tested range is -30 °C to +30 °C.

#3 Readings provided below this level, however, due to interferences the level of uncertainty is greater than at higher levels of the target pollutant.

#4 Results based on field testing around the world versus certified reference or equivalence methods at hourly intervals, in extreme and varied conditions.

#5 Average variance to reference equivalence methods at hourly intervals from field testing around the world, in extreme and varied conditions.

#6 Peak noise is the highest recorded value over the gas reporting interval while average noise is calculated using all noise samples over the same period.

#7 Electrochemical sensors and particle sensors carry a 12-month warranty.

#8 Detail of maintenance required is listed in the standard operating procedure.

#9 Subject to carrier restrictions on dangerous goods.

Performance

Sensor	Limit of confidence ^{#3}	Typical precision to ref ^{#4}	Typical mean prescaled accuracy ^{#5}
NO	< 5 ppb >	0.9 R2	+/- 5 ppb
NO ₂	< 10 ppb >	0.85 R2	+/- 10 ppb
NO _x	< 10 ppb >	0.9 R2	+/- 10 ppb
O ₃	< 5 ppb >	0.9 R2	+/- 10 ppb
CO	< 50 ppb >	0.8 R2	+/- 0.3 ppm
SO ₂	< 10 ppb >	0.7 R2	+/- 10 ppb
H ₂ S	< 5 ppb >	0.7 R2	+/- 5 ppb
CO ₂	< 1 ppm >	0.9 R2	+/- 30 ppm

Sensor	Limit of detection	Typical precision to ref ^{#4}	Typical mean prescaled accuracy ^{#5}
Pod temperature	0.1 °C >	0.9 R2	+/- 2 °C
Pressure	1 mb >	0.9 R2	+/- 5 mb
Humidity	1 % RH >	0.9 R2	+/- 5 % RH
Average noise ^{#6}	20 Hz to 20 kHz	> 0.8 R2	+/- 1 dB
Peak noise ^{#6}	20 Hz to 20 kHz	N/A	+/- 3 dB
Particle count	0 particles >	0.9 R2 variable	N/A
PM ₁ (v2.0)	0 µg/m ³	> 0.9 R2 variable	+/- 15 µg/m ³ variable
PM _{2.5} (v2.0)	0 µg/m ³	> 0.85 R2 variable	+/- 20 µg/m ³ variable
PM ₁₀ (v2.0)	0 µg/m ³	> 0.7 R2	+/- 30 µg/m ³ variable
GPS	0.5 m	N/A	+/- 3 m radius

*Gas algorithm V4.2.3, PM algorithm V2.0
